

BYD BATTERY-BOX PREMIUM QUICK START GUIDE

Valid for HVL 12.0/ 16.0/ 20.0/ 24.0/ 28.0/ 32.0

Please note that this is a Quick Start Guide only, which is a shortened assistance for the installation of the BYD Battery-Box Premium HVL. It does not replace the Operating Manual, which must be read and understood completely before installation. Please download and view it on this website: www.bydbatterybox.com.

Attention: High Voltage! Improper handling can pose a risk of electric shock and damage.

This guide and procedures described herein are intended for use by skilled workers only.

A skilled worker is defined as a trained and qualified electrician or installer who has all of the following skills and experience:

- Knowledge of the functional principles and operation of on-grid systems.
- Knowledge of the dangers and risks associated with installing and using electrical devices and acceptable mitigation methods.
- Knowledge of the installation of electrical devices.
- Knowledge of and adherence to this guide, the complete installation manual and all safety precautions and best practices.

In order to ensure the normal operation of the BYD Battery System, please download the app Be Connect 2.0 and then finish the configuration in accordance with this document.

If there are errors generated during the commissioning or operation, please read the Service Guideline and Checklist alongside this document, or digital version on the website.

If the battery system doesn't start at all, please contact BYD's local after-sales service team within 48 hours. Otherwise, the battery could be permanently damaged.

Please do not stack up batteries without protective packages when storing or handling batteries, except for installation.

Installation
Video

1. Scope of Delivery

2. Not Included in Scope of Delivery

3. Tools

Network Wire Clamp

Pen

Phillips Screwdriver Bit

Torque Wrench

Flat-Head Screwdriver

Wire Stripper

Cylinder Screwdriver

Wrench

Tape Measure

Drill

4. Installation Location

Max +50 °C (122°F)

Min -10 °C (14°F)

RH. +5 %~+95 %

5. Module Parallel Connection Limitation

6. Installation

7. Connection Diagram

Single Tower

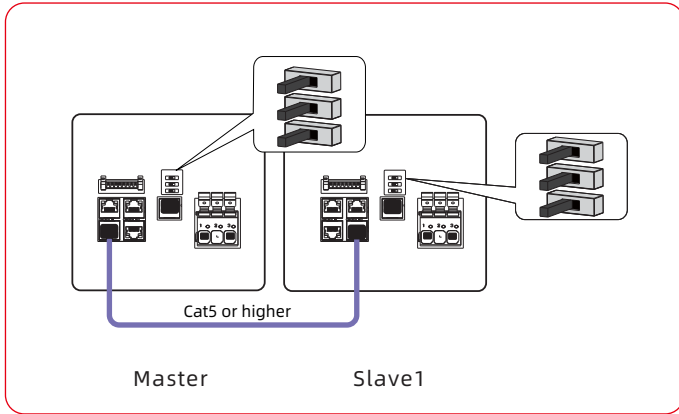

Three Towers. Ignore the Slave 1 in the drawing below to get the diagram of two towers.

8. PE and DC Cables Connection

9. Connecting the Data Cable to other Battery System(s)

10. Data Cable Connection to Inverter

11. Connecting the Network

12. Close up

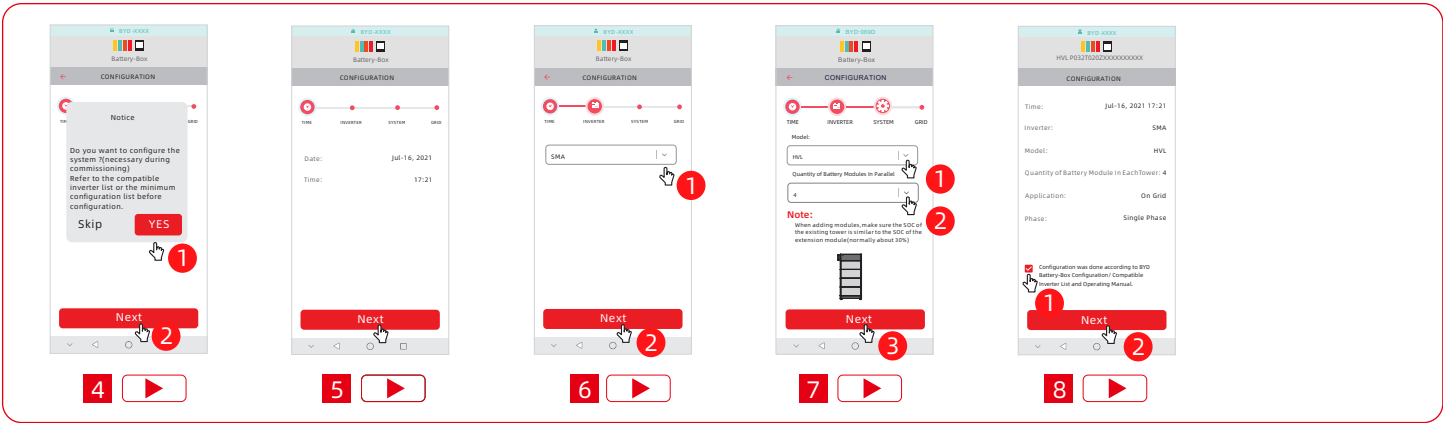

NOTICE

If the panel is not closed, the battery cannot be turned on.

13. Commissioning

14. Switch ON/OFF Procedure

15. Extension

Note: Within 5 days before extension, it is recommended to fully charge the original system to SOC 100%.

	Voltage (X)/ V	SOC(Y)
HVL	<50.32	0~5%
	50.32≤V<51.52	5~10%
	51.52≤V<51.74	10~15%
	51.74≤V<52.24	15~20%
	52.24≤V<52.64	20~25%
	52.64≤V<52.85	25~30%

① Measure the voltage of the new battery module, get a value (X).

② Refer to the above table to find out the SOC (Y) corresponding to the X.

New Battery
SOC ≈ Y

Original Battery
SOC ≈ Y

③ Charge or discharge the original battery system until the SOC is almost equal to Y, and then add the new battery module. Do not forget to do the configuration after that.

16. LED Status

Blinking white and blue alternatively

The battery system is initiating

Solid white

Idle (the battery system is neither charging nor discharging).

Blinking white slowly

The battery system is charging.

Blinking white quickly

The battery system is discharging

Blinking white and solid blue

The battery system is discharging, and the SOC is below 15 %.

Blinking white and blue

An error has occurred (refer to service guideline and checklist for further details)

Communication Options with Inverters
